THE STANDARD SPECIFICATIONS OF THE STATE OF OHIO, DEPARTMENT OF HIGHWAYS, INCLUDING CHANGES AND SUPPLEMENTAL SPECIFICATIONS LISTED IN THE PROPOSAL SHALL GOVERN THIS IMPROVEMENT.

THE RIGHT OF WAY FOR THIS IMPROVEMENT WILL BE PROVIDED BY THE STATE OF OHIO.

I hereby approve these plans and declare that the making of this improvement will require the closing to traffic of the highway and that detours will be provided as indicated on the plans. See Sheet No 42

DETAIL OF JOINT

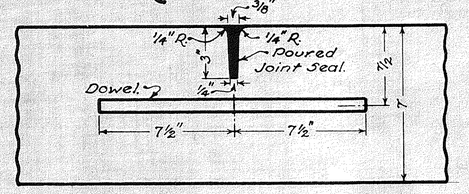
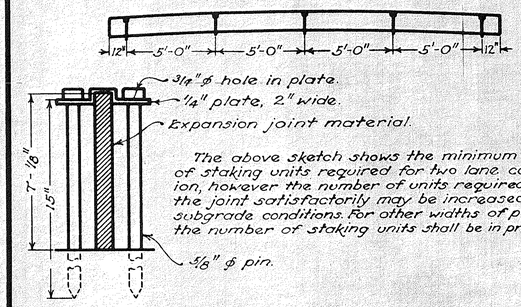
CONTRACTION JOINT



IMPRESSED JOINT

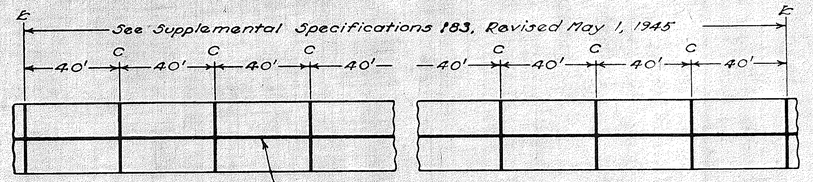
METHOD OF STAKING EXPANSION JOINT



The above sketch shows the minimum number of staking units required for two lane construction, however the number of units required to hold the joint satisfactorily may be increased due to subgrade conditions. For other widths of pavement the number of staking units shall be in proportion.

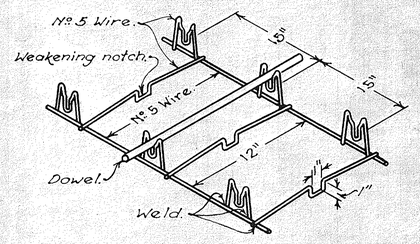
SUGGESTED STAKING UNIT

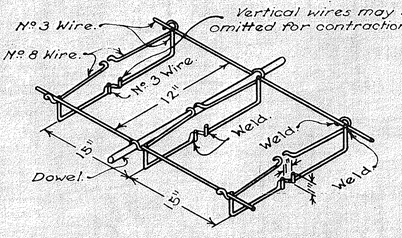
ARRANGEMENT OF TRANSVERSE JOINTS

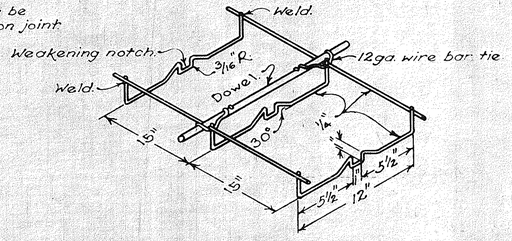


C = Contraction Joint.
E = Expansion Joint.

DOWEL SUPPORT UNITS







NOTES

GENERAL:- The types of expansion joint material shown are to be considered as alternates; the type used on any project being optional with the contractor.

The type of joint selected by the contractor and all operations and materials for installing the joints shall be approved by the engineer.

The spacing of expansion joints shall be according to Supplemental Specifications **183, Revised May 1, 1945.**

Joint arrangements at intersections shall be as shown on the plans or in accordance with working drawings to be furnished by the State.

Special care shall be exercised in edging joints that the width of the opening does not exceed that shown.

A positive method to maintain required alignment shall be used in connecting the expansion joints at longitudinal joints. The expansion joint material shall meet in a vertical joint. Longitudinal keys and keyways, where used, shall be omitted for the thickness of the expansion joint.

EXPANSION JOINTS:- Expansion joints shall be constructed of materials as shown herewith meeting the requirements of Supplemental Specifications 183, Revised May 1, 1945.

Expansion joint material shall be accurately and rigidly held in place by means approved by the engineer. A steel plate for holding joint material during installation will not be required.

The expansion joint material shall be shaped to fit the section of the pavement.

Dowel holes shall be punched in the filler material, and shall be 1 1/16 inch round holes to insure tight fitting dowels.

Each dowel bar shall be equipped with a neat fitting metal cap on one end.

Joints in monolithic curbs shall be constructed with the same type of filler material as used in the expansion joints.

DOWELS:- All dowels shall be ¾ inch round, smooth, straight bars, free from burring and flattening at ends. The entire dowel shall be thoroughly coated before placing in the pavement using either Bituminous Material, Sec M-5.4 SC-2, or heavier or an oil such as 600 W or equal.

Prior to placing all dowels shall be assembled in a unit which is to remain in place for construction, contraction and expansion joints. The length of the unit shall be not less than the distance between longitudinal joints and sufficient support shall be provided to hold the dowels accurately perpendicular to the joint. Expansion joint material shall be forced over the lower cross wires so as to fit snugly on the subgrade. The design of the dowel support unit may be as shown herewith or may be an approved equal and it shall be shop assembled.

When the lane width varies from 11 feet; the spacing of the dowels shall be 15 inches and the 6 inch end spaces shall be equally increased or decreased and shall be less than 10½ inches but not less than 3 inches.

CONSTRUCTION JOINTS:- A bulkhead shall be constructed to permit dowels to extend through the joint. Care shall be taken in removing bulkhead and placing adjacent concrete to see that the dowels are embedded in the concrete without being bent.

A groove for sealing shall be formed by impressing a device or bar into the newly deposited concrete placed after the removal of the bulkhead. The device or bar shall be removed as soon as the concrete is in such condition as to preclude distortion or injury to the concrete. The groove thus formed shall be of the dimensions detailed. After the joint is formed it shall be protected from dirt or foreign matter until the filler is placed.

CONTRACTION JOINTS:- Impressed contraction joints shall be formed by impressing a device or bar into the newly deposited concrete before initial setting. The device or bar shall be removed as soon as the concrete is in such condition as to preclude distortion or injury to the concrete. The groove thus formed shall be of the dimensions detailed. After the joint is formed it must be protected from dirt or foreign matter until the filler is placed.

POURED JOINT SEAL:- The bituminous material for filling impressed joints shall meet the requirements of Sec. M-5.6 F-1 of the General Specifications. The filler shall be handled in such a manner that it will be confined to the joint and in nowise mar the surface.

NOTE:- If wire units are not available another approved method for holding the dowels in place may be used.

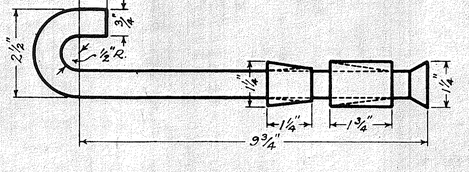
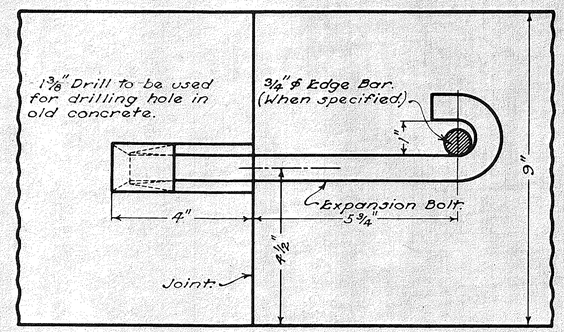
INSERT J BOLT

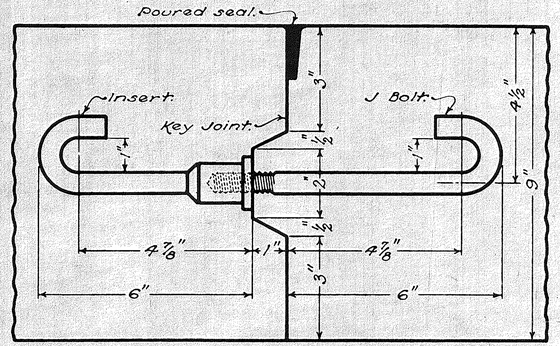
EXPANSION BOLT



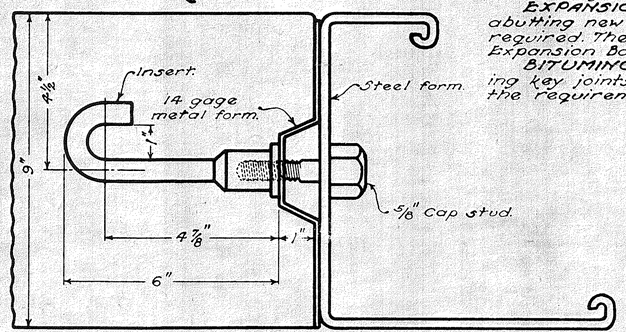
EXPANSION BOLT JOINT



HOOK BOLT AND KEY JOINT



ACCEPTABLE METHOD OF FORMING JOINT



NOTES

GENERAL:— Longitudinal joints shall be used when called for on the typical section, and shall be constructed as shown on this sheet.

Tie bars to be 5/8 inch round, deformed bars.

A satisfactory device shall be used to hold the tie bars in proper position.

The longitudinal joint between adjoining slabs poured in separate operations shall be a key joint with American hook bolts or equal, or billet steel (Sec. M-7.1) tie bars, unless otherwise shown on the plans.

If tie bars are bent no portion of the bend shall extend into the first slab poured.

Immediately prior to placing the second slab, bent tie bars shall be straightened by means of a pipe slipped over the free end of the bar.

Key joints used in part width construction shall be painted with two coats of bituminous material as per Sec. M-5.5 MS-3 before adjoining slabs are poured.

The joints shall be on the center line unless otherwise shown on the plans.

Special care shall be exercised in edging impressed joints that the width of the opening does not exceed that shown.

IMPRESSED JOINT:— This joint shall be formed by impressing a device or bar into the newly deposited concrete before initial setting. The device or bar shall be removed as soon as the concrete is in such condition as to preclude distortion or injury to the concrete. The groove thus formed shall be of the dimensions as detailed. After the joint is formed it shall be protected from dirt and foreign matter until the filler is placed.

KEY JOINT:— This joint is designed for a 9 inch slab. When a greater or less thickness is used the joint shall be proportionally designed. Other deformations may be used if approved by the engineer.

A groove for sealing shall be formed by impressing a device or bar into the newly deposited concrete adjacent to the previously poured lane. The device or bar shall be removed as soon as the concrete is in such condition as to preclude distortion or injury to the concrete. The groove thus formed shall be of the dimensions detailed.

Adjoining slabs adjacent to the longitudinal key joint shall be edged with a thin metal edger having a fourth inch radius. The depth of the vertical lip shall not exceed one-half inch.

After the joint is formed it shall be protected from dirt and foreign matter until the seal is placed.

EXPANSION BOLT JOINT:— This joint is designed for abutting new concrete construction to old when a tie is required. The tie is effected by the use of American Expansion Bolts or equal.

BITUMINOUS SEAL AND FILLER:— Material for sealing key joints and for filling impressed joints shall meet the requirements of Sec. 19-5.6 F-1.

EARTHWORK CALCULATIONS AND NOTES FOR EXISTING BASEMENTS TO BE FILLED UNDER THIS CONTRACT.

EXISTING BASEMENT WALLS TO BE REMOVED TO A POINT 3 FEET BELOW PROPOSED SLOPES, AND TO A POINT 1 FOOT LATERALLY BEYOND TOE OF PROPOSED SLOPES AND DISPOSED OF. EXISTING BASEMENT FLOORS SHALL BE BROKEN UP INTO PORTIONS WHOSE AREA DOES NOT EXCEED ONE SQUARE FOOT, BUT NEED NOT BE REMOVED. THE BROKEN AREA OF FLOOR SHALL EXTEND TO A POINT 1 FOOT LATERALLY BEYOND TOE OF PROPOSED SLOPES.

COMPACTION OF EMBANKMENT IN BASEMENTS SHALL CONFORM WITH THE PROVISIONS OF SEC. E-105 OF THE SPECIFICATIONS.

COST OF REMOVING AND DISPOSING OF BASEMENT WALLS AND BREAKING FLOORS TO BE INCLUDED IN UNIT PRICE BID FOR ITEM E-1 EXCAVATION.

SODDING OF SLOPES EXTENDING INTO BASEMENTS SHALL TERMINATE AT THE EXISTING GROUND SURFACE LINE AND BE EXTENDED TO THE 10' LINE WHEN REMAINDER OF BASEMENT IS FILLED BY THE M.C.D.

2-12" Elms

2-6" Elms

Building 12.2 sq. ft. to first floor. Concrete slabs for basement and first floor still in place.

E. Abut and Piers 1, 2, 3, 4, 5 are skewed 6° 45', also Proposed Channel. West Abut and Piers 6, 7, 8 are skewed 5° 22', also B&O tracks.

SOUNDINGS:

The estimated average piling lengths shown on these plans and used as a basis for the approximate estimate have been chosen as the result of a few rod soundings made at the site. This information is available to bidders, but the contractor shall assume responsibility for lengths of piling selected for driving.

NOTE:
Fed Aid Proj. U-338 (3) 1946 extends East of ℄ of Pier 4.
Fed Aid Proj. UG-338(2) 1946 extends West of ℄ of Pier A.

(To be removed)
PRESENT STRUCTURE – BR. Nº ST-30-63
3-Stone Arches, 46'-0" Clear Span x 32'-8" Wide. Extended to the South with Steel Pratt Truss for roadway width of 46'-1" Curb to curb with 7'-6" Plank Walk on North and 8'-0 Concrete Walk on South. Stone and concrete Piers and Abutments.

PROPOSED STRUCTURE

Type - Continuous steel beam and girder bridge with concrete floor and substructure.
Spans - Girder unit - 80', 100', 100', 80' c to c bearings
Beam unit 68'-10", 58'-5½", 68'-6", 68'-6" 55'-0" c. to c. bearings.
Roadway - 52' plus two 6'-0" sidewalks
Loading - S-20-40
Skew - 6°-45' for E. abut., piers 1,2,3,4,5 and proposed channel.
- 5°-22' R.F. for W. abut., piers 6,7,8, and B.&O. tracks.
Surface course - 2½" Bituminous.
Approach slabs - 15' long.

S-29	Cast iron scuppers (2 piece)											12		12 Units
T-35	Asphaltic concrete, Type, same as approaches.											273		273 Cu. Yds.
S-29	8" Galvanized corrugated metal pipe. Sec. M-6.4(a) b-3, b-4 or b-5												350	350 Lin. Ft.
S-24	Removal of existing structure, as per plan												Lump	Lump Sum

NOTE:- See Sheet No. 24A for division of estimated quantities for Federal Aid Projects U-338 (2) and UG-338 (2).

PAINTING OF STEEL RAILING AND LAMP STANDARDS:- Paint for shop coat shall meet the provisions of Sec. M-9.9, Sec. M-9.20 or Sec. M-9.21. The first field coat shall be the same as the shop coat. The second and third field coat shall be tinted to match color chart to be furnished by Chief Engineer of Bridges.

GENERAL NOTES

SUPPLEMENTAL SPECIFICATIONS AND STANDARD DRAWINGS S-203, dated 4/6/45, M-102.12 dated 8/2/43, AS-44-S dated 4/2/45, and CSB-15-40 sheets 1 & 2, revised 10/1/40, form part of this set of plans.

REMOVAL OF EXISTING STRUCTURE: See General Note on Sheet 24A for details of removal.

WELDING:- All welding shall be Class "A".

PAINTING OF STRUCTURAL STEEL Paint for shop coat shall meet the provisions of Sec. M-9.9, Sec. M-9.20, or Sec. M-9.21. The first field coat shall be the same as the shop coat. The second and third field coat shall be aluminum paint as per Sec. M-9.12.

FIELD OFFICE:- The contractor shall provide a field office for the exclusive use of engineers and inspectors, as described under "Structures (General)" in the Specifications. It shall have a floor area of at least 150 sq. ft. Payment shall be considered to be included in the contract price bid for the various items.

PILING shall be driven to a minimum bearing capacity of 35 tons.

VIBRATION:- All concrete shall be mechanically vibrated.

RIVETS shall be $\frac{7}{8}$"φ.

SLAB DRAINS:- Drains shall be placed through the roadway slabs as per Sec. S-29.07 and as shown on "Typical Half Cross Sections."

ERECTION NOTE Thoroughly pin, bolt, and rivet bottom flange splice at Pier 5. Next, the end of the beam at Pier 6 shall be raised and supported during the completion of the top flange splice at Pier 5. In like manner the end of the beam at Piers 7 and 8 shall be raised before completing the top flange splice at the preceding pier. Finally, the end of the beam at the West Abutment shall be raised before completing the top flange splice at Pier 8.

The erection procedure outlined above assumes that the contractor will elect to begin erection at Pier 4.

The contractor shall complete the construction of piers numbered 4 and 5 as promptly as possible after removal of necessary parts of the old structure. (See special clauses in the proposal relative to the contractors use of existing grade crossings and his obligations to protect railroad traffic.) It is anticipated that construction of a section of the improvement of the Penna. R.R. main tracks will be deferred pending their removal (by the War Departments contractor, following which that section and the entire improvement shall be completed as promptly as possible to restore traffic to Lincoln Way.

ERECTION NOTE continued:- See table below for amount of raising of beams at piers and abutment:

Beam Location	Pier 6	Pier 7	Pier 8	W. Abut.
Fascia Beams	$2\frac{3}{8}$"	$2\frac{3}{8}$"	$2\frac{1}{2}$"	$1\frac{3}{8}$"
Curb Beams	$1\frac{1}{2}$"	$1\frac{5}{8}$"	$1\frac{5}{8}$"	1"
Roadway Beams	$1\frac{1}{4}$"	$1\frac{3}{8}$"	$1\frac{3}{8}$"	$\frac{3}{4}$"

R.R. CONSTRUCTION CLEARANCES:- Minimum construction clearances shall be 18'-0" vertically above the top of main tracks of the B. & O. R.R. and W. & L.E. R.R., and 19'-0" above top of main track of the Penna. R.R., and 16'-0" above top of Penna. Co. service track, and 8'-0" horizontally from the center line of all tracks.

STEEL SHEET PILING:- Before excavating for pier footings for Piers 4 and 5, steel sheet piling shall be driven as sheeting for this excavation, and as the excavation progresses this sheeting shall be thoroughly braced in a manner satisfactory to the Chief Engineer of the Railroad Company, so as to absolutely guarantee the safety of rail traffic at all times. This sheeting shall be included with "Excavation for Structures" for payment.

UNIT STRESSES for concrete and steel design as per "Specifications for Design of Highway Structures" ~ July 1940.

PILING (Continued)
Because of the possibility of scour at Piers No. 2 and No. 3 the piles should preferably be driven to a minimum penetration of 20 ft. Drive rod tests indicate that the contractor may experience some difficulty in reaching a 20 ft. penetration at the north end of Pier No. 2 and under Pier No. 3.
Drive rod tests also indicate that for Pier No. 2 piling lengths may vary from 20 ft. at the north end to 32 ft. at the south.

REMOVAL OF EXISTING STRUCTURE:-
The contractor shall remove the existing stone arch bridge including stone masonry, fill etc., to spring line of arches and such portions of west abutment and east pier as necessary for construction of new piers, and the existing structural steel shall be removed to top of cylindrical steel piers.
The stone from old bridge shall be stock piled, for future use of the Government, between Fourth St. N.W. and toe of Penna. R.R. slope and between Water St. N.W. and Sippo Creek West. The steel from the old bridge shall become the property of the contractor, as part payment for its removal, and shall be removed from the site by him.

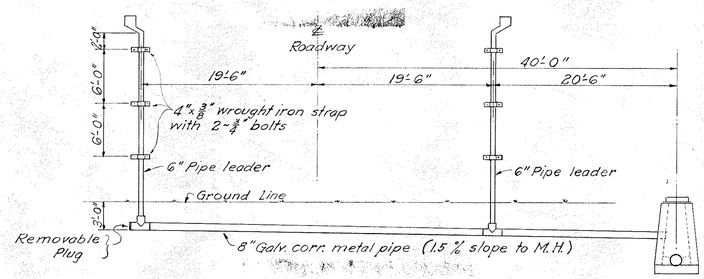
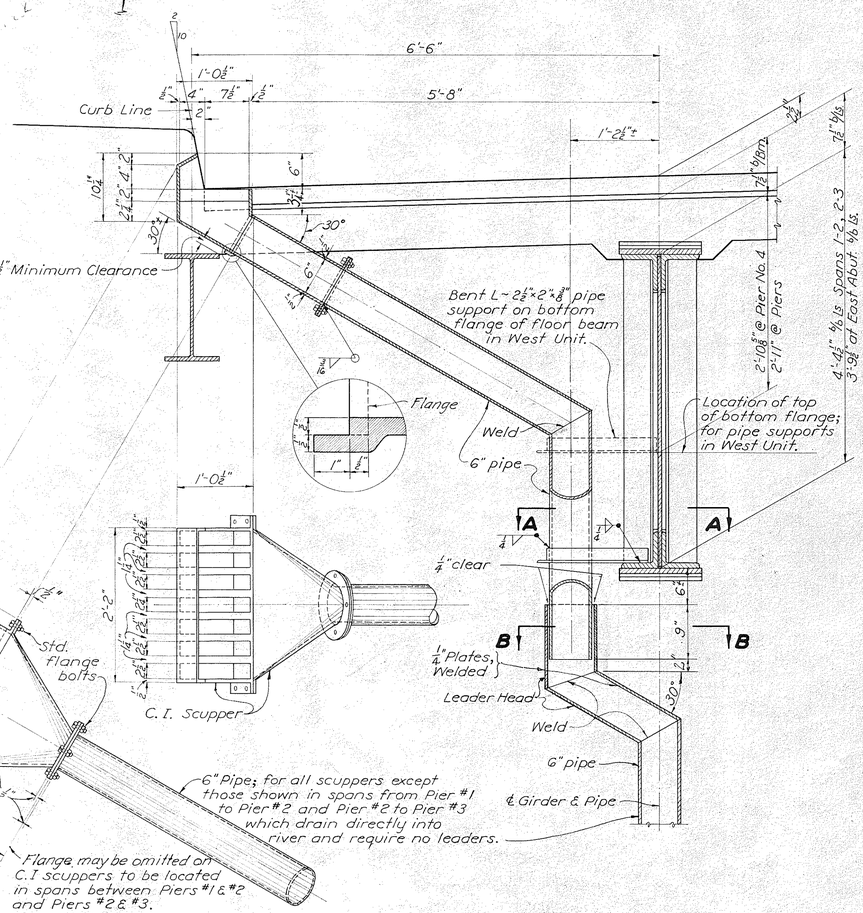
DRAINAGE PLAN FOR BRIDGE



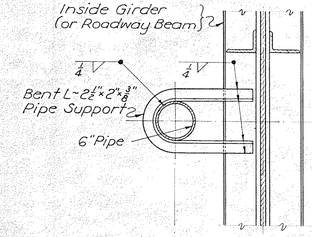
SECTION C-C

Typical drainage detail for Piers 4, 6, and 8.

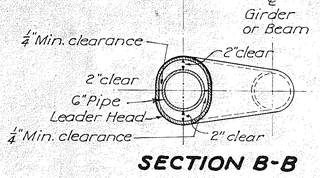
Pipe Specials and Pipe Supports included with pipe for payment.



C.I. SCUPPER AND DRAINAGE DETAILS



SECTION A-A



SECTION B-B

6" pipe shall be wrought iron pipe @ 18.97 #/' or copper-bearing steel pipe at 18.97 #/'.

Pipe, fittings and supports shall be galvanized.

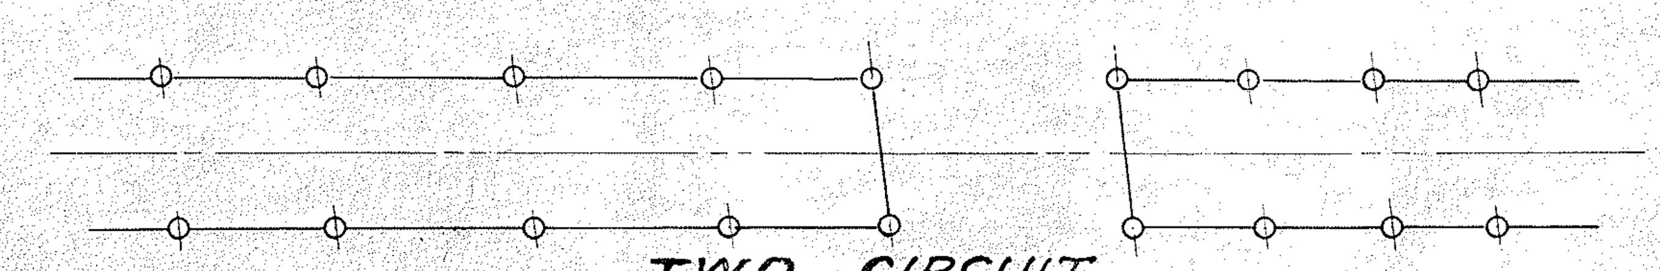
PLAN OF BASE



TWO CIRCUIT WIRING DIAGRAM

SYSTEM 60 cycle, 20 Amp. Primary 20 Amp. Secondary constant current series circuit. (Two circuits)

CONDUIT Two inch (2") diameter, full weight, (including pull boxes and expansion joints corresponding to all expansion joints in the structure).

CABLE No. 6 single conductor Telurium Parkway cable for 2500 Volts, 5/64 Versatal Insulation.

TRANSFORMER One 7½ KW. Type S.L. transformer with 20 amp. primary and 20 amp. secondary No. G.E. 72 x 319 including protective device and G.E. Type S.L. transformer cutout.

LIGHTING UNITS Union Metal lamp standard as shown on drawings with G.E. suspension luminaires, Form 1010 Cat. No. AGG4 with 2" heat insulated slip fitterhood and film cutout series receptacles.

LAMPS 10,000 lumen Mazda 20 amps. series type.

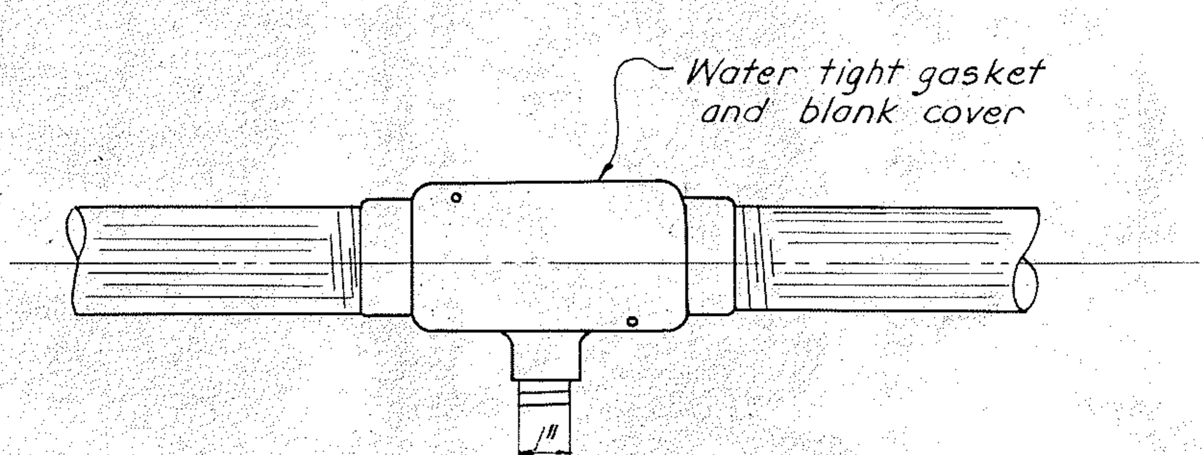
PAINTING same as railing.

POWER AND MAINTENANCE by City of Massillon, Ohio.

All exposed cable outside of junction boxes shall be protected by flexible conduit.

Where specific manufactures are specified, their equivalent will be acceptable.

City to furnish and connect their cables to points A and furnish and connect their conduit to bridge conduit at ends of wings.



CONDUIT DRAIN

If conduit does not drain naturally, insert tee fitting with reduced side outlet at low point of each run and provide suitable drain.

WORK TO BE DONE BY B&O. and W.U. FORCES
AT EXPENSE OF OHIO DEPARTMENT OF HIGHWAYS
1. Relocate underground cable before construction and upon completion of bridge remove same.
2. Remove two sets of Crossing gates and flashing light attachments.
3. Remove two standard timber warning signs.
4. Remove two standard steel pipe flasher light warning signs, relay boxes and connections.
5. Relocate Home signal on W.&L.E. at new location.
6. Remove concrete slabs highway crossing in B&O. main tracks.
7. Ballast and resurface main tracks at crossing.

CALCULATIONS

U-338(2)
T-35 Type B
1¼" Surface Course - Sta. 3+00 to Sta. 4+75.91 = 175.91 L.F.
175.91 × 66 ÷ 9 = 1290.01 S.Y.
From Rdw'y & Pav't. Table) = 1206.4 S.Y.
Total = 2496.41 S.Y.
To General Summary 2496.41 × 1.25 ÷ 36 = 86.68 C.Y. Use 87 C.Y.

B-35 Leveling
To General Summary (Same as T-35, Type B) = 86.68 C.Y. Use 87 C.Y.

B-35 Base
3" Base Course (From Rdw'y & Pav't Table) = 405.2 S.Y.
To General Summary = 405.2 × 3 ÷ 36 = 33.77 C.Y. Use 34 C.Y.

8" B-71
Area (From 1¼" T-35, Type B Calc) = 1290.01 S.Y.
From Rdw'y & Pav't Table = 921.6 S.Y.
To General Summary Total = 2211.61 S.Y. Use 2212 S.Y.

T-30
Area = 2211.61 S.Y. + 86.1 S.Y. = 2297.71 S.Y.
To General Summary = 2297.71 × 0.10 = 229.77 Gal. Use 230 Gal.

T-35, Type B, Mod. for Bridge Surfacing
2½" Area (From Rdw'y & Pav't Table = 86.1 S.Y.
To General Summary = 86.1 × 2.5 ÷ 36 = 5.98 C.Y. Use 6 C.Y.

I-11 Stone Curb
From Rdw'y & Pav't Table = 397.50 L.F.
Minus 4 No. 3 C.B. @ 6'-1" = 24.33 L.F.
To General Summary - Total = 373.17 L.F. Use 373 L.F.

I-4 Pipe Underdrain
* I-11 from Rdw'y & Pav't Table = 119.9 + 116.0 = 235.9 L.F.
I-4 from Rdw'y & Pav't Table = 1080 L.F.
To General Summary Total = 343.9 L.F. Use 344 L.F.

I-117
6" I-117 from Rdw'y & Pav't Table = 122.2 S.Y.
To General Summary = 122.2 × 6 ÷ 36 + 15% = 23.42 C.Y. Use 23 C.Y.

SS-112
Sta. 3+00 to Sta. 4+75.91 = 175.91 L.F.
175.91 (E.A. - 55.89 S.F.) ÷ 27 = 364.13 C.Y.
SS-112 from Rdw'y & Pav't Table = 168.00 C.Y.
To General Summary Total = 532.13 C.Y. Use 532 C.Y.

E-11 Water
Embankment (From Earthwork Table = 3818 C.Y.
SS-112 (Above) = 532 C.Y.
Embankments in Cuts = (75 × 70 × 8" ÷ 12") ÷ 27 = 130 C.Y.
Total = 4480 C.Y.
To Gen. Sum. = 4480 C.Y. × 5 (Gal) = 22,400 Gal. Use 22 M Gal.

L-10 Sodding
To General Summary (From Sheet 9) = 1556 S.Y.

L-9 Sodding
To Gen. Sum. = 1556 (Above) × 9 × 20 × 1/1000 = 280.08 lbs. Use 280 lbs.

UG-338 (2)
T-35 Type B
1¼" Surface Course - Sta. 13+60.38 to Sta. 17+03.91 = 343.53 L.F.
343.53 × 66 ÷ 9 = 2519.22 S.Y.
(From Rdw'y & Pav't Table) = 1625.1 S.Y.
Total = 4144.32 S.Y.
4144.32 × 1.25 ÷ 36 = 143.90 C.Y.
Extra T-35 from Summary Table = 4.00 C.Y.
To General Summary = 147.90 C.Y. Use 148 C.Y.

B-35 Leveling
To General Summary (from T-35, Type B) = 143.90 C.Y. Use 144 C.Y.

B-35 Base
3" Base Course (From Rdw'y & Pav't Table) = 334.2 S.Y.
To General Summary = 334.2 × 3 ÷ 36 = 27.85 C.Y. Use 28 C.Y.

8" B-71
Area (From 1¼" T-35 Type B Calc) = 2519.22 S.Y.
From Rdw'y & Pav't Table = 1371.9 S.Y.
To General Summary - Total = 3891.12 S.Y. Use 3891 S.Y.

T-30
Area = 3891.12 S.Y. + 86.1 S.Y. = 3977.22 S.Y.
To General Summary = 3977.22 × 0.10 = 397.72 Gal. Use 398 Gal.

T-35, Type B
2½" Area (From Rdw'y & Pav't Table) = 86.1 S.Y.
To General Summary = 86.1 × 2.5 ÷ 36 = 5.98 C.Y. Use 6 C.Y.

I-11 Stone Curb
From Rdw'y & Pav't Table = 722.4 L.F.
Minus 8 No. 3 C.B. @ 6'-1" = 48.67 L.F.
To General Summary - Total = 673.73 L.F. Use 674 L.F.

I-4 Pipe Underdrain
* I-11 from Rdw'y & Pav't Table = 250.7 + 146.0 + 1150 = 511.7 L.F.
I-4 from Rdw'y & Pav't Table = 1950 L.F.
To General Summary - Total = 706.7 L.F. Use 707 L.F.

I-117
6" I-117 from Rdw'y & Pav't Table = 508 S.Y.
To General Summary = 508 × 6 ÷ 36 + 15% = 97.37 C.Y. Use 97 C.Y.

SS-112
Sta. 13+60.38 to Sta. 17+03.91 = 343.53 L.F.
343.53 × (E.A. 55.89 S.F.) ÷ 27 = 711.11 C.Y.
SS-112 from Rdw'y & Pav't Table: 319 C.Y.
To General Summary - Total = 1030.11 C.Y. Use 1030 C.Y.

E-11 Water
Embankment (From Earthwork Table = 9385 C.Y.
SS-112 (Above) = 1030 C.Y.
Emb. in Cuts = (129 × 70 × 8" ÷ 12") ÷ 27 = 223 C.Y.
(86.59 × 60 Ave. × 8" ÷ 12") ÷ 27 = 128 C.Y.
Total = 10,766 C.Y.
To General Summary 10,766 C.Y. × 5 Gal. = 53,830 Gals. Use 54 M Gal.

L-10 Sodding
To General Summary (From Sheet 11) = 2583 S.Y.

L-9
To Gen. Sum. = 2583 (Above) × 9 × 20 × 1/1000 = 464.94 lbs. Use 465 lbs.

STARK COUNTY
S.H. 69 SEC. MASSILLON (PT.)

GENERAL NOTES

TRAFFIC NOTE:-
The highway, between the west line of Third Street and the east line of Sixth Street, shall be closed to traffic until construction is completed.
Through traffic shall be detoured as indicated on sheet number 1, commercial vehicles using Walnut Road and passenger vehicles using Tremont Street and later Walnut Road.
The Contractor shall arrange his operations so that traffic inconvenience will be held to a minimum and access to abutting properties provided at all times from Station 3+00 to the west line of Third Street, and from the east line of Sixth Street to the end of the project. Methods of work procedure and traffic maintenance shall be submitted to the Engineer for approval.
Traffic shall be maintained at all times on Third Street North and South, and on Sixth Street North and South including access to abutting properties.
The length of one-way traffic zones shall be kept to a minimum consistent with the requirements of Sec. T-35.23 of the material specifications.
Access to the B & O.R.R. passenger and freight stations shall be maintained at all times from Water Street & Tremont St.
The item of Maintaining Traffic at the points indicated above shall include furnishing lights, signs, barricades and watchman necessary to secure the flow of traffic twenty four (24) hours daily in addition to the requirements of Sec. G-.07 of the material specifications.

UTILITY ADJUSTMENT:-
Removal and replacement, as necessary of the structures or facilities of all Public Utilities, including Water and Power Lines and other Public or City Utilities occupying the Highway or Streets, and coordinating such work with construction activities so as to avoid delays to the Contractor shall be performed by the Massillon Conservancy District or the City of Massillon in conformance with the specifications of the State of Ohio.

FINISHING CONCRETE BASE OR PAVEMENT:-
Hand finishing will be permitted as per Sec. B-70.191 or T-70.201 of the General Specifications

PLACING CONCRETE BASE:-
The concrete base shall be placed and finished in single lane widths of 9', 12', 12', 12', 12', 9' each as shown on typical section.

DISPOSAL OF WASTE MATERIAL:-
Any excavation which is unfit for incorporation in the improvement and which would appear unsightly, shall be covered with earth to a minimum of 18" and made to comform to the contour of the adjacent land if wasted within 300' of the right of way, without expense to the State, notwithstanding the written permission of the property owner to do otherwise.

SILT:-
Excavated material and borrow of which the grain size of 50% or more is between 0.074 m m and 0.005 m m (State Highway Testing Laboratory method of testing) shall be placed at least 3 feet below the pavement when used in embankment.

ITEM L-9 10-6-4 COMMERCIAL FERTILIZER & L-10 SODDING:-
Quantities for sodding Item L-10 are calculated for the soil areas to the right of way or slope easement lines as shown on the cross-sections, but shall not be performed unless the existing sod has been destroyed during construction. 10-6-4 Commercial fertilizer shall be applied at the rate of 20 lbs. per 1000 sq. ft. At the discretion of the Director the fertilizer formula may be modified or changed to meet available formulae.
ITEM L-10 SODDING:-
Areas to be sodded shall be loosened to a depth of 2" just prior to laying the sod. This work is to be included for payment in the price bid per sq.yd. of sodding. Fertilizer shall be applied to the areas to be sodded just prior to loosening operations, this work to be included in the unit price bid per pound for Commercial Fertilizer.
Time limitation on sodding may be waived at the discretion of the director. If the limitation is waived, a straw mulch 2" thick shall be placed on the sod immediately after laying and watering. The mulch shall be held in place by methods approved for E-305 seeding. The cost of this mulch shall be included in the price bid per sq.yd. of item L-10 sodding. Sod shall be well tamped to meet the grade shown on the cross-sections or in such a manner that proper drainage is not impeded. Excavation required in addition to tamping to allow the meeting of cross-section grades is to be included for payment in the price bid per sq.yd. of sodding.

BERMS AND SLOPES:-
Berms and slopes shall be finished in accordance with the typical section except where otherwise shown on the cross-sections.
While the cross-sections as drawn show straight lines and angles, in construction all corners shall be rounded as shown on the typical section.

FIELD HOUSE:-
The Contractor shall provide a suitable Field Office for the exclusive use of the Engineer and inspectors assigned to this project. This office shall have a minimun of 200 sq.ft of floor space and so arranged, equipped and lighted that the State Employees will have a convenient place for making the necessary records, etc. and have a safe place for storage of equipment, plans & necessary supplies. The Contractor shall have a telephone installed and maintained during construction of this project.
When the work is in progress during cold weather, the office shall be heated to a temperature of at least seventy (70°) degrees farenheit.
See section S-0.01(b) of the Construction and Material Specifications

PAVEMENT JOINTS:- Contraction and expansion joints will not be permitted in the construction of the reinforced concrete base course item B-71. Longitudinal joints in item B-71 shall be in accordance with SS-183 Revised May 1, 1945.
The provisions of Supplemental Specification no. 183 revised May 1, 1945 shall apply to the construction of the portland cement concrete pavement item T-70. The spacing of contraction joints in item T-70 shall be 20 feet.

ADDITIONAL NOTES:-
See sheets No. 21, & 21-A for additional general notes.
See sheets No. 4 & 7 for typical sections of existing pavement.
For proposed and existing bridge data see sheet No. 5.

SEALING:-
Vertical faces of new work, such as castings, curbs, etc. against which the new bituminous concrete is to be placed, shall be painted or sealed with bituminous material in accordance with Sec. E-10.02. The cost of such operations and material shall be included in the price bid for bituminous concrete.
PIPE UNDER RAILROADS:-
During construction of cast iron pipe under railroads, traffic must be maintained to the satisfaction of the railroads.
Before beginning installation of the section of pipe under the railroads, the Contractor shall submit for approval by the Chief Engineers of the affected railroads, a plan showing the proposed method of sheeting and shoring the excavation. If in the opinion of the Chief Engineers of the railroads, the proposed method of sheeting & shoring is such that supporting will be required for the track, such supporting will be done by railroad forces at the expense of the Contractor.

PRIME COAT INCLUDING SAND COVER:-
Bituminous Prime Coat, Section M-5.5 MS-1 shall be applied by distributor or by brooms at the rate of 0.10 gallon per square yard. After the bituminous material has been applied, all material not required to give a uniform coating to the surface shall be swept into all cracks and open joints before the sand cover is placed. Sand cover shall be uniformly spread at a rate of from 2 to 5 pounds per square yard. The sand shall be spread at such time and shall be in such condition that it will adhere to the bituminous material. Cost of sand cover shall be included in the price bid per gallon for bituminous material.

TREATMENT OF FEATHERED AREA:-
Where directed, the new surface course shall be feathered. The area upon which less than one (1) inch of surface course is to be placed shall be considered as the area to be feathered. A paint coat of the same bituminous material used in the mix shall be applied to this area before placing the bituminous concrete surface course. The cost of such operation and material shall be included in the price bid for bituminous concrete.

CASTINGS AND GRATES
The castings and grates on all catch basins and manholes abandoned shall be carefully removed by the Contractor and become the property of the City of Massillon

GUTTER SEAL
After placing and compacting the bituminous concrete surface course, the gutter surface shall be sealed with the same bituminous material contained in the mixture. Only enough material shall be applied to coat the surface for a distance of 15 inches from the curb or 24 inches wide from a "V" gutter. The material shall be applied by an approved method at a temperature of from 300° F. to 350° F. The cost of such operation and material shall be included in the price bid for bituminous concrete.
CONSERVANCY WORK
The War Department will let a contract for channel widening, removal of parts of the old structure not removed by this contract, track relocation and other work in accordance with the official plan of the Massillon Conservancy District. The Contractor shall co-ordinate his activities with the work of other contractors on the site.
