Re: Site Plan Approval to Install New Treated Groundwater Outfall to Newman Creek

Dear Mr. Popiel:

On Behalf of Wyeth LLC (Wyeth), Weston Solutions, Inc. (WESTON) is submitting this preliminary plan to construct a new outfall structure within the floodplain of Newman Creek to replace and relocate an existing permitted treated groundwater discharge to the creek. This information is being submitted to your office with a request for guidance on the appropriate municipal reviews or permit applications that should be submitted to obtain authorization to construct the outfall.

The former World Kitchen, Inc. property at 359 State Avenue NW has been acquired from Wyeth by PSC Metals. However, Wyeth continues to operate a groundwater treatment system on the property. The current treated groundwater comingles with stormwater drainage from the existing facility and discharges at a downstream location shown on the attached location map. Wyeth intends to construct a new outfall structure that will convey only treated groundwater to a new proposed discharge location and separate the discharge from the facility stormwater system.

WESTON has confirmed with the Stark County Soil and Water Conservation District that a National Pollutant Discharge Elimination System (NPDES) Construction Activity permit is not required because the total limit of disturbance for this project is less than one acre. WESTON intends to submit the proposed construction plans to the US Army Corps of Engineers Huntington District for authorization to perform any work below the ordinary high-water elevation in Newman Creek.

Please contact me at your earliest convenience and inform me of any permit applications required to be submitted to the City of Massillon to construct the proposed outfall structure. Thank you for your consideration this matter. If you have any questions, please call me at 610-701-3069 or email me at [Lindsey.Blanchette@westonsolutions.com](mailto:Lindsey.Blanchette@westonsolutions.com).

Very truly yours,  
Weston Solutions, Inc.
