

West Main Street Addition
(See Plat A4282.5)

This area includes a small block adjacent to the intersection of West Main Street and Tremont Street. Inasmuch as the Wooster Trunk is already constructed as far as Tremont Street and the corporation line, it will be necessary to construct only short extensions to afford service to this area and to a portion of the Brookfield area.

Generally it will be possible to locate most of the sewerage for this area within present or future street limits; but, there have been shown on the plat A4282.5 certain extensions which are located within a present unsubdivided acreage.

The trunk extensions necessary to serve this area are listed with those for Brookfield (see previous).

Further extension of city limits may affect the sewers of this district, but the addition must be small because of topography and also because the present additions virtually absorb the area allowance for growth.
